

I recently bought into the XM Satellite Radio system in my home & auto. I enjoy the ability to travel and keep listening to the same station at the same quality through out an extended drive. When I recently drove from Tucson to Houston I was able to hear traffic & weather reports for Houston as I neared the city. It was a great enhancement to the trip. It tears my heart to think that the NAB is attempting to reign in my ability to listen to what I want, when I want with a consistent quality that standard broadcast radio is unable, or unwilling, to provide.

I pay for these services and it should not be up to the National Association of Broadcasters to dictate what I am permitted to hear. I respectfully urge the FCC to reject the NAB's petition 04-160 and to support XM's ability to provide the kind of programming that you demand and deserve.
